

SANJIDA TASNEEM

Backend AI Engineering Intern | AI/ML & Deep Learning

Chattogram, Bangladesh | 01980318233 | sanjidasneem24@gmail.com | linkedin.com/in/sanjida-tasneem-a87318276 | github.com/sanji24096

CAREER OBJECTIVE

Final-year Computer Science and Engineering student and Backend AI Engineering Intern with hands-on experience building and evaluating deep learning models (CNNs, transfer learning, XAI) for real-world image classification problems. Seeking to contribute to AI/ML engineering roles that combine backend development with applied machine learning research.

EXPERIENCE

Backend AI Engineering Intern — FlyRank AI

2026 – Present

- Completing a structured AI Fluency onboarding curriculum covering Python-based AI tool workflows, delegation frameworks, and applied engineering practices.
- Produced a formatted workflow audit and configured a dedicated AI workspace as part of internship onboarding deliverables.

EDUCATION

BSc in Computer Science & Engineering (CSE)

Expected 2026

International Islamic University Chittagong (IIUC) — Currently in 8th Semester

TECHNICAL SKILLS

- Machine Learning & Deep Learning: CNNs, Transfer Learning, TensorFlow, Keras, PyTorch (working), Model Evaluation & Explainability (Grad-CAM, Grad-CAM++, Integrated Gradients)
- Programming Languages: Python, C, C++, Java
- Web & Backend: HTML, CSS, PHP, Django
- Database: SQL, MySQL
- Tools & Platforms: Git/GitHub, VS Code, XAMPP, Google Colab, Jupyter Notebook

PROJECTS

Waste Image Classification with Extended DenseNet201

- Built and evaluated six CNN backbones (ResNet50, EfficientNet-B3, MobileNetV3-Large, VGG16, VGG19, DenseNet201) in Python (TensorFlow/Keras) on a 35,168-image, 9-class dataset with significant class imbalance.
- Achieved 98.49% test accuracy, Cohen's Kappa 0.9820, and ROC-AUC 0.9989 with a fine-tuned, attention-extended DenseNet201 using a two-phase transfer learning protocol.
- Applied explainable AI methods (Grad-CAM, Grad-CAM++, Integrated Gradients, Insertion/Deletion faithfulness) to validate model decisions.

Dual-Modality Skin Lesion Classification

- Designed a Dual-Branch ResNet50 architecture with Weighted Feature Fusion to combine dermoscopic and clinical images.
- Implemented a Missing-Modality Handling mechanism to maintain model robustness when one image modality is unavailable.

Multimodal Bangla Disaster Severity Classification (IIUC CSE Fest Datathon)

- Built a DINOv2 + BanglaBERT fusion model for multimodal disaster severity classification, achieving a validation F1-score of ~0.62.

MindMate — Mental Wellness Application (Python)

- Built a mood-based interactive application with games and activities to support emotional well-being and stress management.

ACTIVITIES & ACHIEVEMENTS

- Participated in the IIUC CSE Fest 2026 Datathon, building a multimodal deep learning model under time constraints.
- Completed 95% of Anthropic Academy coursework as part of structured AI Fluency training during internship onboarding.
- Attended workshops, seminars, and technical training sessions related to AI and software development.
- Provided private tuition to school-level students, strengthening communication and mentoring skills alongside academics.

SOFT SKILLS

Teamwork • Communication • Problem-Solving • Technical Presentation • Adaptability
